### REC\_DS using C\_Week 2\_COD\_Question 1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

**Input Format**

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

### ***Output Format***

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: a b c -

Output: Forward Playlist: a b c

Backward Playlist: c b a

### ***Answer***

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
struct Node {  
    char item;  
    struct Node* next;  
    struct Node* prev;  
};
```

```
// You are using GCC
```

```
void insertAtEnd(struct Node** head, char item) {  
    struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));  
    newNode->item = item;  
    newNode->next = NULL;  
    newNode->prev = NULL;
```

```
    if(*head == NULL) {  
        *head = newNode;  
        return;
```

```

    }
    struct Node* temp = *head;
    while(temp->next != NULL) {
        temp = temp->next;
    }
    temp->next = newNode;
    newNode->prev = temp;
    //type your code here
}
void displayForward(struct Node* head) {
    struct Node* temp = head;
    while (temp!= NULL) {
        printf("%c ",temp->item);
        temp = temp->next;
    }
    //type your code here
}

```

```

void displayBackward(struct Node* tail) {
    struct Node* temp = tail;
    while(temp!= NULL) {
        printf("%c ",temp->item);
        temp = temp->prev;
    }
    //type your code here
}

```

```

void freePlaylist(struct Node* head) {
    struct Node* temp;
    while(head != NULL) {
        temp = head;
        head = head->next;
        free(temp);
    }
    //type your code here
}

```

```

int main() {
    struct Node* playlist = NULL;
    char item;
    while (1) {
        scanf(" %c", &item);
    }
}

```

```
    if (item == '-') {  
        break;  
    }  
    insertAtEnd(&playlist, item);  
}  
  
struct Node* tail = playlist;  
while (tail->next != NULL) {  
    tail = tail->next;  
}  
  
printf("Forward Playlist: ");  
displayForward(playlist);  
printf("Backward Playlist: ");  
displayBackward(tail);  
  
freePlaylist(playlist);  
  
return 0;  
}
```

**Status :** Correct

**Marks :** 10/10
