# Rajalakshmi Engineering College

Name: SONASREE RP

Email: 240701521@rajalakshmi.edu.in

Roll no: 240701521 Phone: 7305340666

Branch: REC

Department: I CSE FE

Batch: 2028

Degree: B.E - CSE

## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 3\_MCQ\_Updated

Attempt : 1 Total Mark : 20

Marks Obtained: 17

Section 1: MCQ

1. In the linked list implementation of the stack, which of the following operations removes an element from the top?

Answer

Pop

Status: Correct Marks: 1/1

2. Which of the following operations allows you to examine the top element of a stack without removing it?

**Answer** 

Peek

Status: Correct Marks: 1/1

3. Elements are Added on \_\_\_\_ of the Stack.

Answer

Top

Status: Correct Marks: 1/1

4. Here is an Infix Expression: 4+3\*(6\*3-12). Convert the expression from Infix to Postfix notation. The maximum number of symbols that will appear on the stack AT ONE TIME during the conversion of this expression?

Answer

3

Status: Wrong Marks: 0/1

5. Consider a linked list implementation of stack data structure with three operations:

push(value): Pushes an element value onto the stack.pop(): Pops the top element from the stack.top(): Returns the item stored at the top of the stack.

Given the following sequence of operations:

push(10);pop();push(5);top();

What will be the result of the stack after performing these operations?

#### Answer

The top element in the stack is 5

Status: Correct Marks: 1/1

6. Pushing an element into the stack already has five elements. The stack size is 5, then the stack becomes

Answer

Overflow

Marks: 1/1 Status: Correct

What will be the output of the following code?

```
#include <stdio.h>
     #define MAX_SIZE 5
     int stack[MAX_SIZE];
     int top = -1;
     void display() {
       if (top == -1) {
          printf("Stack is empty\n");
       } else {
          printf("Stack elements:");
          for (int i = top; i >= 0; i--) {
            printf("%d", stack[i]);
          printf("\n");
       }
     }
     void push(int value) {
       if (top == MAX_SIZE - 1) {
stack[++top] = value;
int --
          printf("Stack Overflow\n");
       display();
       push(10);
       push(20);
       push(30);
       display();
       push(40);
       push(50);
       push(60);
return 0;
       display();
```

#### Answer

Stack is emptyStack elements: 30 20 10Stack OverflowStack elements: 50 40 30 20 10

Status: Correct Marks: 1/1

8. The user performs the following operations on the stack of size 5 then at the end of the last operation, the total number of elements present in the stack is

```
push(1);
pop();
push(2);
push(3);
pop();
push(4);
pop();
pop();
pop();
push(5);

Answer

1

Status: Correct

Marks: 1/1
```

9. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
int stack[MAX_SIZE];
int top = -1;
int isEmpty() {
    return (top == -1);
}
int isFull() {
    return (top == MAX_SIZE - 1);
}
void push(int item) {
```

```
if (isFull())
    printf("Stack Overflow\n");
  else
    stack[++top] = item;
int main() {
  printf("%d\n", isEmpty());
  push(10);
  push(20);
  push(30);
  printf("%d\n", isFull());
  return 0;
Answer
10
Status: Correct
                                                                    Marks: 1/1
10. What is the value of the postfix expression 6 3 2 4 + - *?
Answer
-18
Status: Correct
                                                                    Marks : 1/1
11. In an array-based stack, which of the following operations can result
in a Stack underflow?
Answer
```

Popping an element from an empty stack

Status: Correct Marks: 1/1

12. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
```

```
void push(int* stack, int* top, int item) {
    if (*top == MAX_SIZE - 1) {
         printf("Stack Overflow\n");
         return;
       }
       stack[++(*top)] = item;
    int pop(int* stack, int* top) {
       if (*top == -1) {
         printf("Stack Underflow\n");
         return -1:
       return stack[(*top)--];
    int main() {
       int stack[MAX_SIZE];
      int top = -1;
       push(stack, &top, 10);
       push(stack, &top, 20);
       push(stack, &top, 30);
       printf("%d\n", pop(stack, &top));
       printf("%d\n", pop(stack, &top));
       printf("%d\n", pop(stack, &top));
return 0;
       printf("%d\n", pop(stack, &top));
    Answer
    302010Stack Underflow
                                                                         Marks: 0/1
    Status: Wrong
```

13. Which of the following Applications may use a Stack?

Answer

All of the mentioned options

Status : Correct

Marks : 1/1

14. What is the primary advantage of using an array-based stack with a fixed size?

Answer

Efficient memory usage

Status: Correct Marks: 1/1

15. A user performs the following operations on stack of size 5 then which of the following is correct statement for Stack?

```
push(1);
pop();
push(2);
push(3);
pop();
push(2);
pop();
pop();
pop();
pop();
pop();
pop();
pop();
Answer
```

Stack operations will be performed smoothly

Status: Wrong Marks: 0/1

16. Consider the linked list implementation of a stack.

Which of the following nodes is considered as Top of the stack?

**Answer** 

First node

Status: Correct Marks: 1/1

17. The result after evaluating the postfix expression 10 5 + 60 6 / \* 8 - is

Answer

142

Status: Correct Marks: 1/1

18. When you push an element onto a linked list-based stack, where does the new element get added?

#### Answer

At the beginning of the list

Status: Correct Marks: 1/1

19. In a stack data structure, what is the fundamental rule that is followed for performing operations?

#### Answer

Last In First Out

Status: Correct Marks: 1/1

20. What is the advantage of using a linked list over an array for implementing a stack?

### **Answer**

Linked lists can dynamically resize

Status: Correct Marks: 1/1
